

# Cut the Cord, Go Wireless!

## Transform Your Mobile Devices into Signature Pads

mSign is a powerful, secure application that allows you to capture high-quality handwritten signatures on smartphones or tablets, making signature collection possible anywhere, wirelessly

Expedite the signature collection process

Eliminate additional USB hardware

Maximize efficiency on the go

### Wireless Signature Pad Solution

Capture signatures through a supported Android or iOS device to sign in any Scriptel integrated application including:

- Adobe PDFs
- Word and Excel Documents
- Google Docs and Sheets
- Third-party Software
- OpenOffice/LibreOffice Write and Calc Documents
- Virtually any other application via an image file or TWAIN scanner input

### Emulate a Scriptel Signature Pad

mSign allows a mobile device to behave exactly as a Scriptel signature pad with data transmitted over a WiFi or mobile data connection.

mSign acquired signatures contain all the data normally captured from our signature pads along with:

- End to end encryption for added security
- Enhanced mode with color, different resolutions, sizes, and aspect ratios
- Private or public network wireless communication
- Multiple desktop connectivity
- Real-time data transfer to Windows PC
